

TacPoint Upper & Lower Features and Benefits

- **Multi-Network:** Interfaces to Multiple HF & VHF Networks
- **Single Control Application:** Links to both Upper & Lower Networks
- Interfaces to RT devices via Ethernet
- Automatic routing of Blue Force Tracking messages
- Unique Network Identification configured via SCS and KMS
- Enhanced Command & Control

Upper And Lower Network Support

The *RT Family* provides communication solutions that provide Secure Digital Voice, Position Transfer and Data Messaging capabilities that can span multiple networks. It is typical for Military networks to, at any given hierarchical level, belong to both an Upper and Lower radio command network.

The *RT Family* supports this Hierarchical network structure and provides a mechanism to secure these networks separately whilst allowing data to flow between networks, if so configured.

Commanders are able to command and control lower echelons while being able to communicate with higher echelons from the same user interface - *TacPoint*.
